

Annotation HCV Ultra Array

- Annotation of the peptides is in the ID column

- Annotation has the format:

NS5B_0501_01000000

- The first part of the string indicates the antigen and can be:
 - C; E1; E2; P7 (NS1), NS2, NS3, NS4A, NS4B, NS5A, NS5B
- The second part of the string indicates the position of the first amino acid of the peptide within the antigen
- The third part indicates the genotype of the antigen. A 1 in the respective position stands for genotypes

Genotype-string **01000000**
Genotype **1 2 3 4 5 6 7**

- For mapping peptides onto HCV sequences download sequences from euhcvdb.ibcp.fr/euHCVdb/
